Procedure – Complete PyCharm Setup

Step 1 – Open PyCharm

Open PyCharm.
Select:
New Project → SoftwareTesting

Step 2 – Select Python Interpreter

Select a Python interpreter available on the computer.

Step 3 – Create Python File

Create:
tutorial13.py

Step 4 – Install Selenium

Open:

PyCharm → Terminal

Execute:
pip install selenium

Step 5 – Verify Selenium

Execute:
pip show selenium

Step 6 – Write Python Program

```
from selenium import webdriver driver = webdriver.Chrome()
 driver.maximize_window()
 driver.get("https://www.selenium.dev/")
 print("Browser launched successfully")
 print("Page Title:", driver.title)
print("Current URL:", driver.current_url)
driver.quit()
```

Step 7 – Run Program

Right-click:
tutorial13.py

Select:
Run 'tutorial13'

Step 8 – Observe Browser

Google Chrome should open automatically and load the Selenium website.

Step 9 – Observe PyCharm Console

Expected output will show:

Browser launched successfully

Page Title: Selenium

Current URL: https://www.selenium.dev/

Source Code

```
from selenium import webdriver

driver = webdriver.Chrome()

driver.maximize_window()

driver.get("https://www.selenium.dev/")

 print("Browser launched successfully")

 print("Page Title:", driver.title)

 print("Current URL:", driver.current_url)

 driver.quit()
```

Screenshot:

1. Code in PyCharm
2. Browser opens (Selenium website)
3. Console output
4. Browser closes after execution
from selenium import webdriver
driver = webdriver.Chrome()
driver.maximize_window()
driver.get("https://www.selenium.dev/")
print("Browser launched successfully")
print("Page Title:", driver.title)
print("Current URL:", driver.current_url)
driver.quit()
Browser launched successfully
Page Title: Selenium
Current URL: https://www.selenium.dev/
Process finished with exit code 0
Build the next generation of web and mobile apps
Selenium automates browsers. That's it!
