Instagram Profile & Account Settings – Functional Test Report

Module Name: Instagram Profile & Account Settings - Functional Test Cases

Test Case ID: str_id_02

Tester Name: Rajput Roshni

Test Case Description: To validate the functionality of Instagram profile username, WhatsApp Business connection, profile banner, and bio features.

Prerequisites: 1. Stable internet connection 2. Instagram mobile application 3. Active Instagram account 4. Valid profile/account details for testing

Environment Information: Platform: Instagram Mobile Application (Android)

Scenario ID: a1

Scenario: Change Instagram username

Test Steps:

1. Open Instagram profile settings

2. Open the Username field

3. Enter a new username

4. Attempt to save the username

Test Input: New username: tdtdtdyfugugivug7gugugigig8g7g

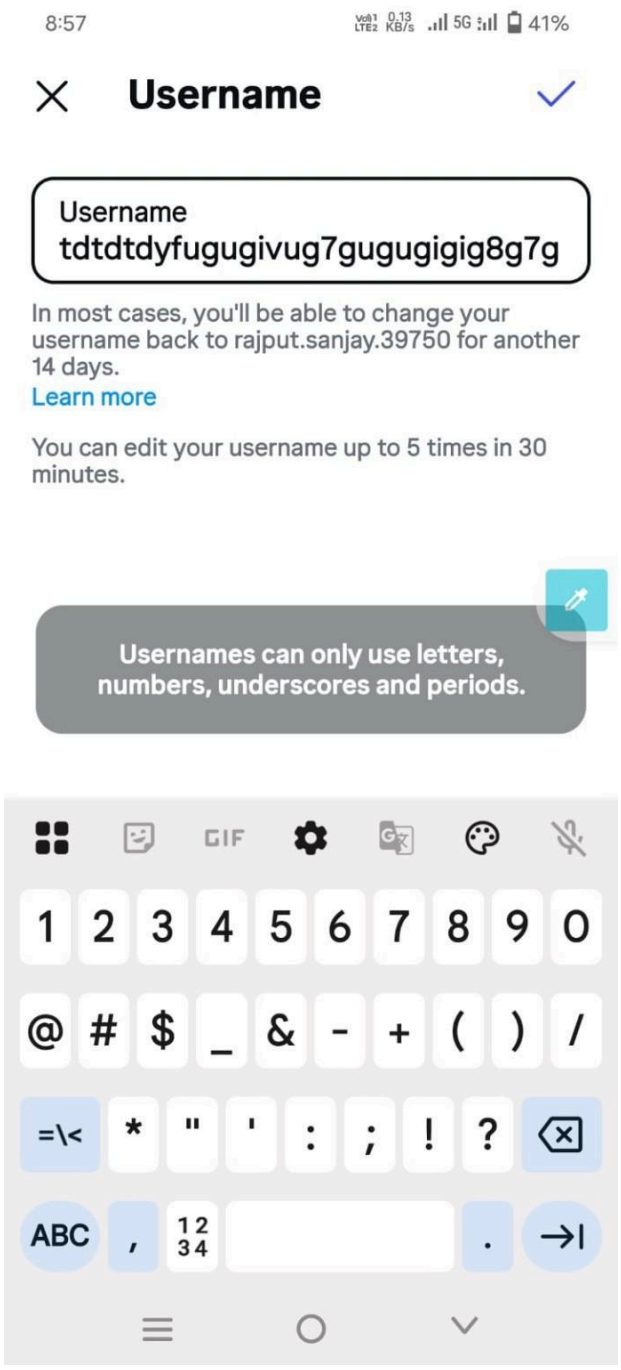

Expected Results: The entered username should be accepted when it contains only permitted letters and numbers.

Actual Results: The system displays the message: “Usernames can only use letters, numbers, underscores and periods.”

Status: Fail

Comments: The entered value appears to contain letters and numbers only, but the system still displays a username-format validation message. Username validation should be checked.

Screenshots:

Scenario ID: a2

Scenario: Connect WhatsApp Business account

Test Steps:

1. Open the WhatsApp Business connection option

2. Select India (+91)

3. Enter the phone number

4. Attempt to send the verification code

Test Input: Country: India (+91); Phone number entered in the screenshot

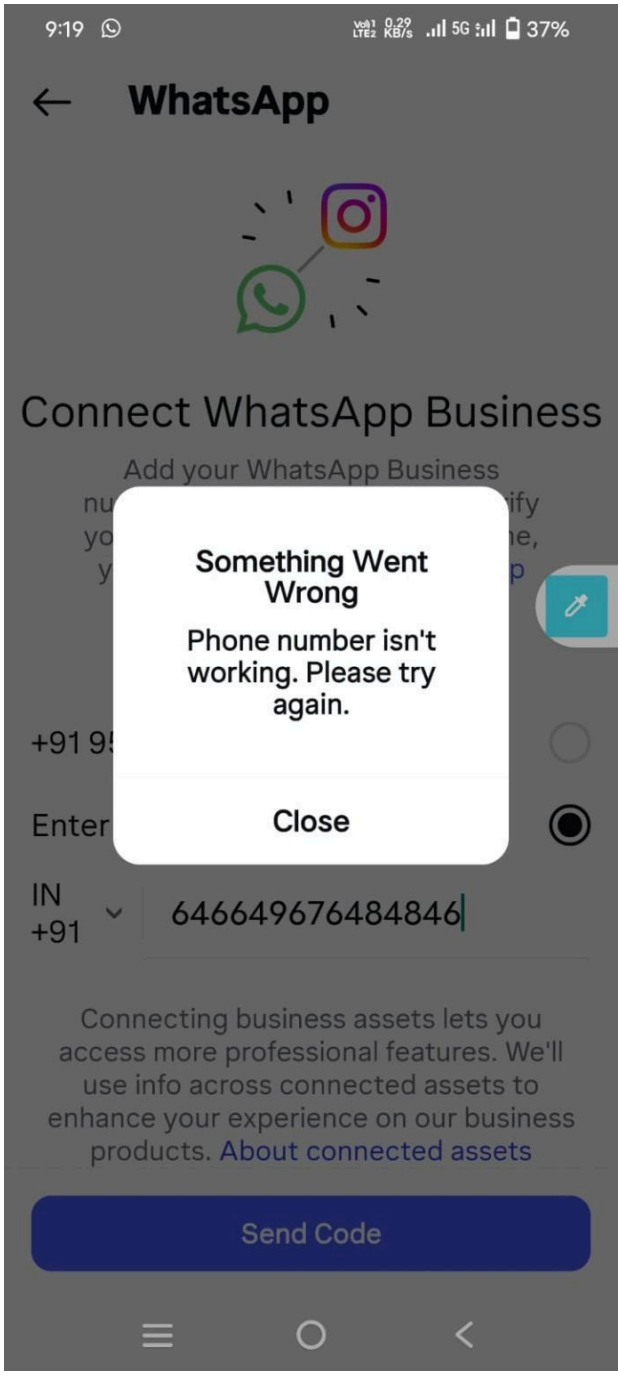

Expected Results: The system should validate the phone number and, when valid, send a verification code. If invalid, it should show a clear validation message.

Actual Results: A “Something Went Wrong” message appears stating: “Phone number isn't working. Please try again.” The Send Code action is not completed.

Status: Fail

Comments: The error message is generic. The system should provide a clearer reason when the entered phone number is invalid or unsupported.

Scenario ID: a3

Scenario: Edit profile banner

Test Steps:

1. Open Banners

2. Select the profile banner text field

3. Enter banner text

4. Check the character counter

Test Input: 20-character banner text containing symbols

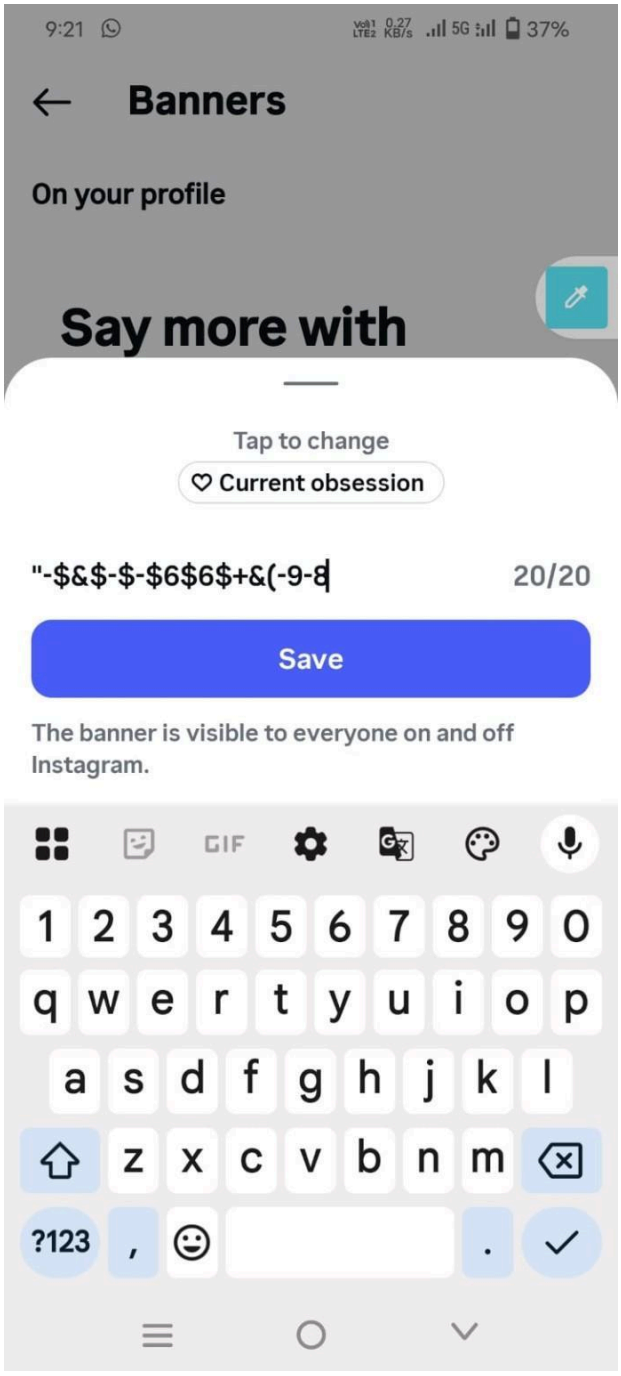

Expected Results: The banner should accept text within the allowed character limit and show the correct character count.

Actual Results: The banner field accepts the entered text and displays 20/20 characters. The Save button is available.

Status: Pass

Comments: The screenshot shows the maximum 20-character limit being reached without a validation error.

Screenshots:

Scenario ID: a4

Scenario: Edit profile bio

Test Steps:

1. Open the Bio section

2. Enter text in the bio field

3. Check the character counter

4. Attempt to save the bio

Test Input: Bio text at the 150-character limit

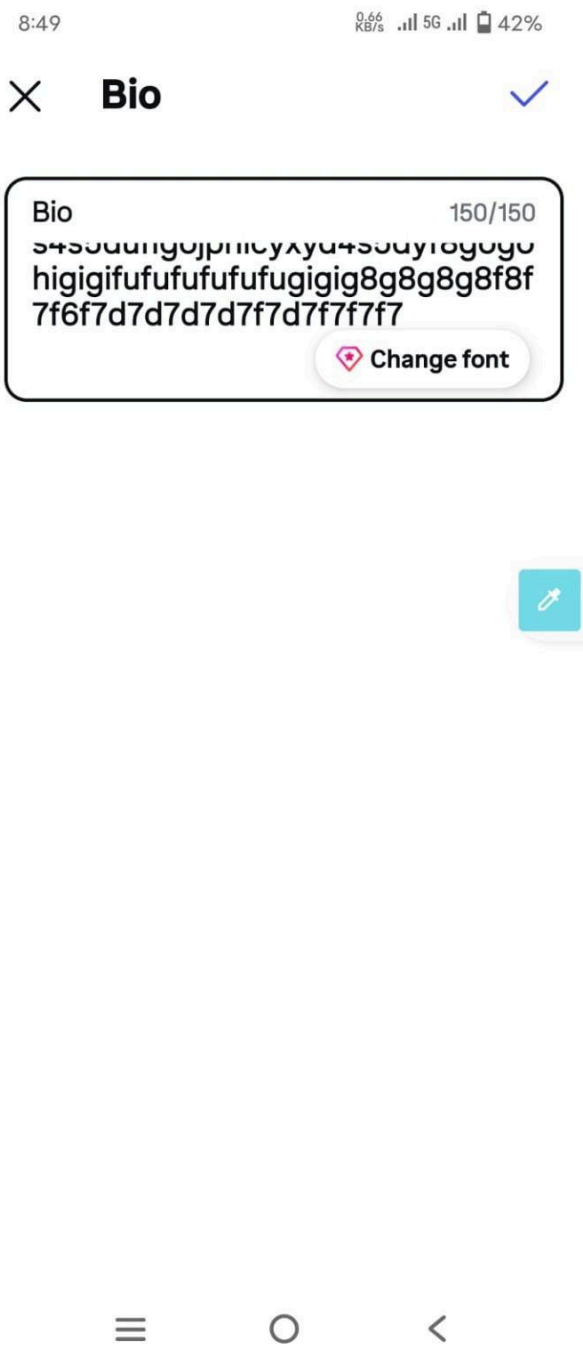

Expected Results: The bio should allow text up to the stated 150-character limit and display the correct character count.

Actual Results: The bio field displays 150/150 characters and no character-limit error is shown.

Status: Pass

Comments: The screenshot confirms the 150-character limit is reached successfully.

Test Summary

Total Test Scenarios: 4

Passed: 2

Failed: 2

Pass Rate: 50%

Conclusion: The tested Instagram profile/account features show successful handling of the banner and bio character limits. Issues were observed during username change and WhatsApp Business connection, where validation/error handling requires further checking.
